

Material Compatibility with Hg

Work of George Greene
BNL
April, 2001

AIChE Journal Vol. 49, No.4 (April 2003)

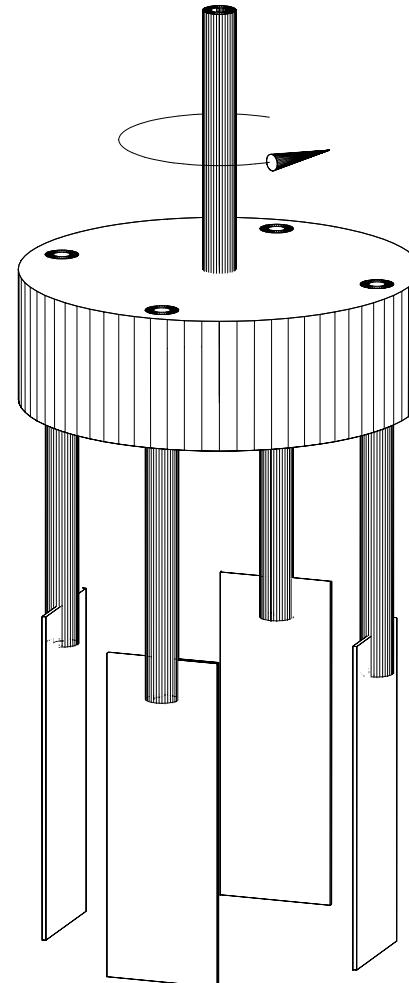

Harold G. Kirk
Brookhaven National Laboratory

Experimental Setup

- Samples were circulated in a Hg bath
- Circulation rate was 120 rpm
(1" offset → 0.3m/s)
- Circulation duration was 24 to 50 Hrs

Materials Studied

- Inconel 718
- Inconel 600
- 316L Stainless Steel
- Havar (Co 42 Cr 20 Fe 19 Ni 13 W 2 Mo 2)
- Ti90Al6V4
- Al
- Cu

Erosion Rate Results

Material	Surface Erosion $\mu\text{g}/\text{cm}^2/\text{h}$	Surface Erosion $\mu\text{m}/\text{h}$
Inconel 718	--	--
Inconel 600	--	--
316L SS	--	--
Havar	6	0.007
TiAlV	--	--
Al	1500	5.5
Cu	1200	1.4
