# MERIT layout in TT2/TT2A/TT10

---

CERN AB-ATB

<http://cern.ch/proj-hiptarget>

VRVS session, Jan. 2006

# ACAD drawing

- Preliminary version published on the web:
  - EDMS: <https://edms.cern.ch/document/695011>
  - Future versions are always to be found there, check regularly
  - Viewable with AutoCAD, but also with eDrawings

## Items indicated

- Z=0 definitely defined
- Indicators for mercury loop, solenoid, beam attenuator, quadrupoles, beam diagnostics, collimator, passage TT2 to TT2A, auxiliary equipment, N2 exhaust, ...

# Layout file (ACAD)

auxiliary equipment:  
DVB, racks,  
electronics, ...

Passage

N2 exhaust

TT10 TUNNEL and LIN  
LIGNE et TUNNEL TT1

TUNNEL TT2  
TT2 TUNNEL

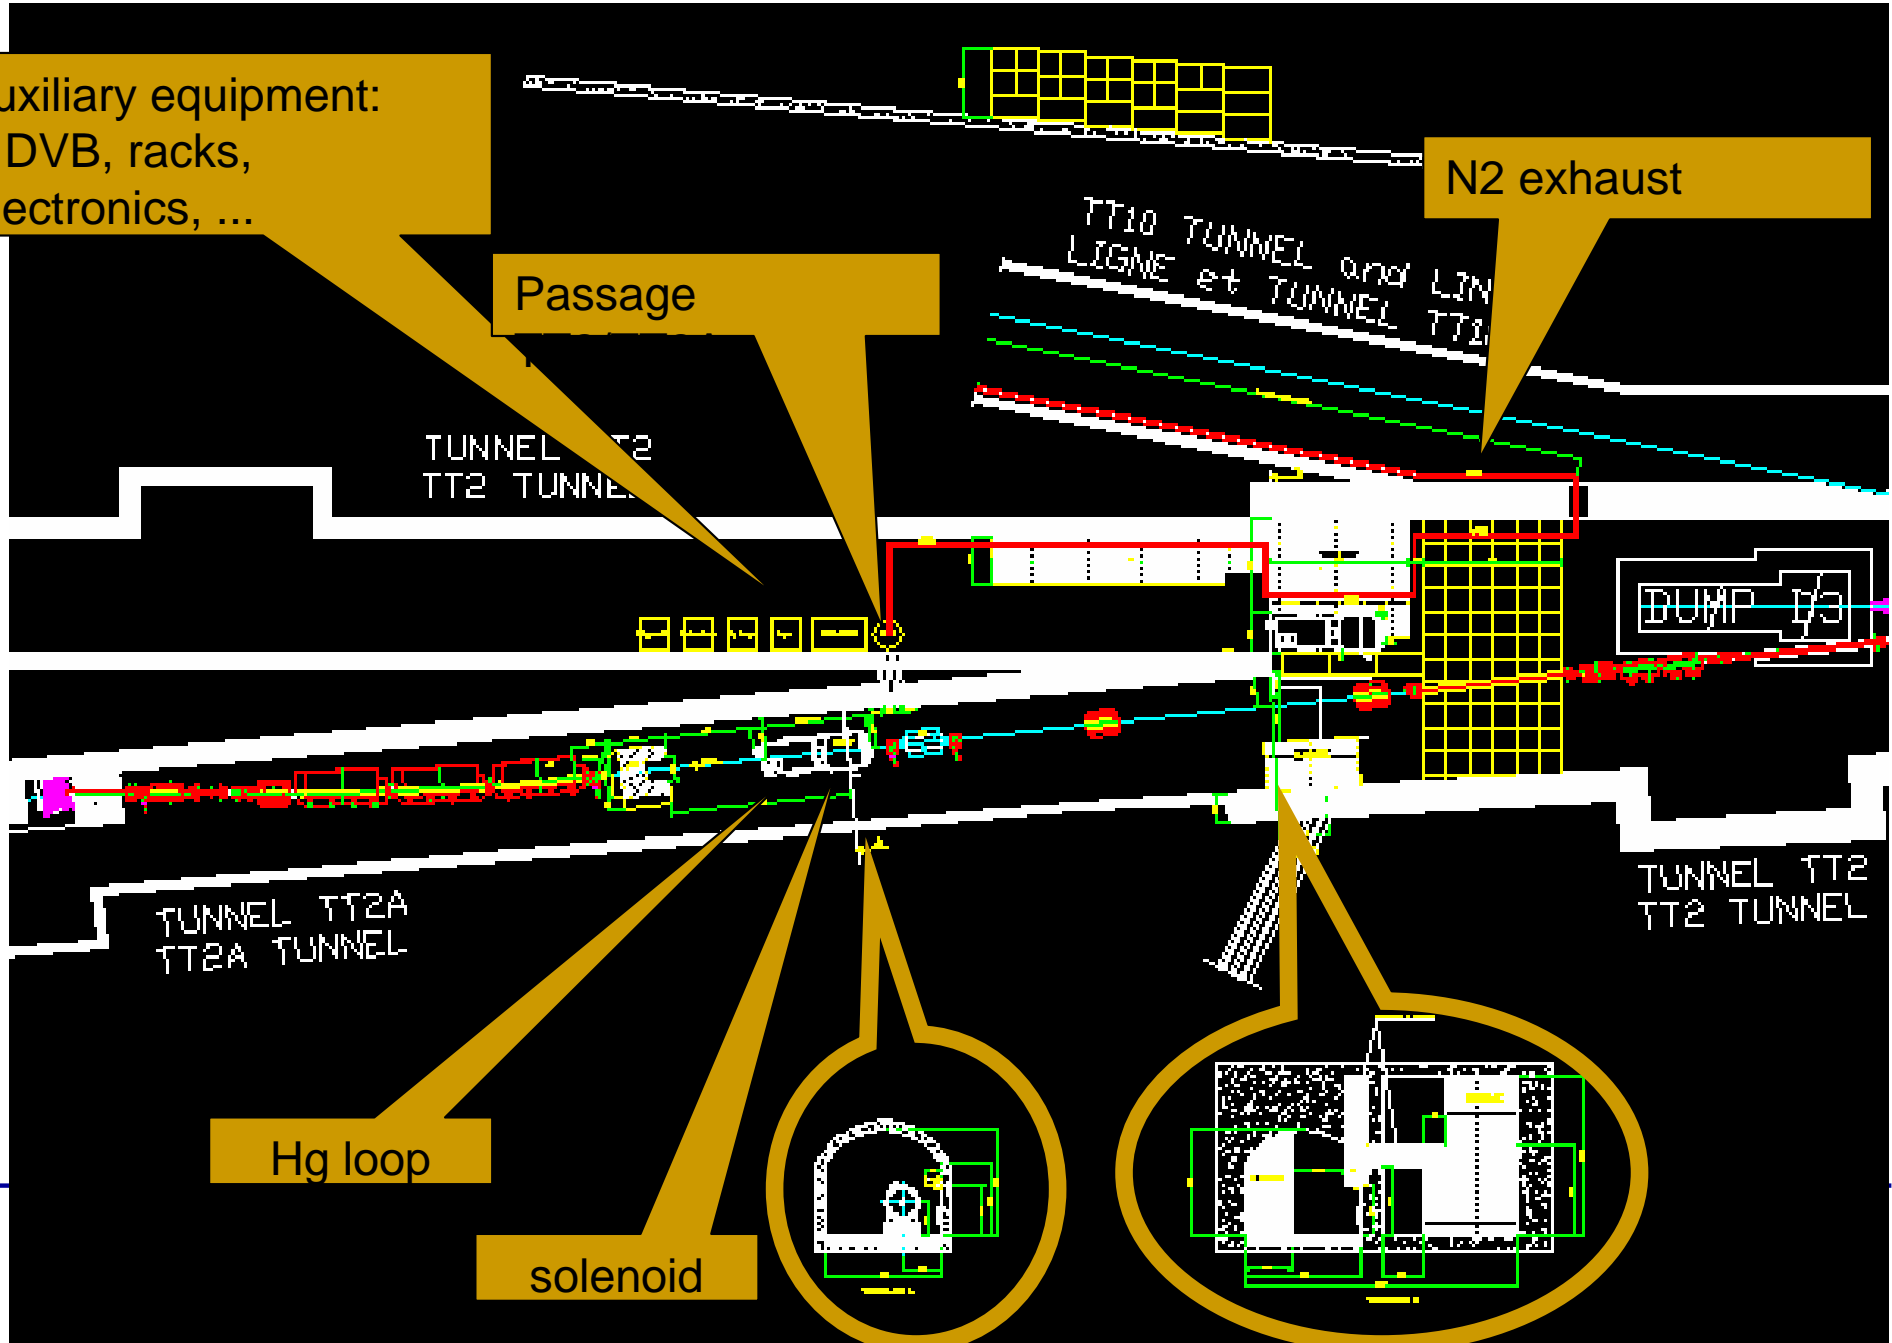

DUMP 1/3

TUNNEL TT2A  
TT2A TUNNEL

TUNNEL TT2  
TT2 TUNNEL

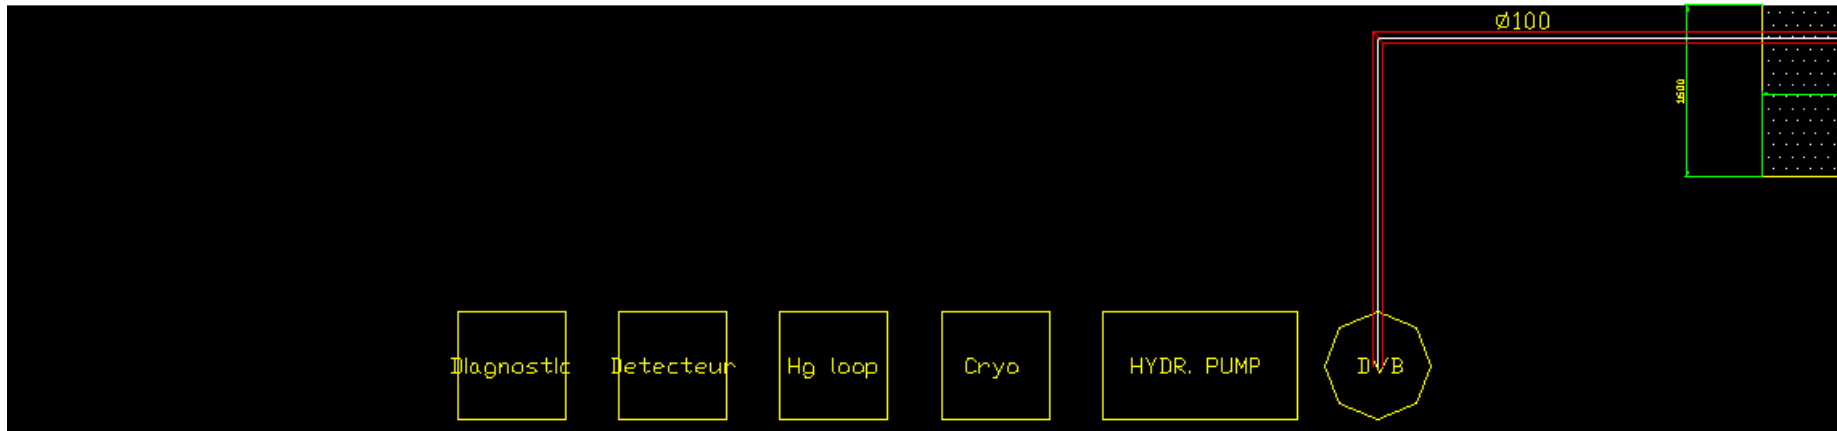

Hg loop

solenoid

# Z=0 and periphery

# Soon to come

- Cryogenic lines
- End of TT2A, separation to nToF target
- Exact location of quadrupoles
- Transport “kinematics”
- Cooling plant of nToF in TT2/TT2A junction
- Do we require vacuum pipe in TT2A? ( $l=15$  m)
- ...

# Open issues

## Input required from collaboration

- ...
- Size & location of passage TT2 ↔ TT2A (cryogenics, Hg loop, diagnostics, ...)
  - A list should be setup with all requests (send e-mail)
  - Requests should contain: sizing, location, quantity, special requirements
- Space for solenoid connections (bus bar, cryo, ...)
  - To define spacing between solenoid and collimator/BI
- Space allocation in TT2 for auxiliary equipment (ALL)
  - location, size, special requirements
- ...
